

Published by the British  
Herpetological Society

**Table A1.** Estimated K values from STRUCTURE runs using the  $\Delta K$  method. L(K), posterior probability of K; stdev, standard deviation of L(K);  $\Delta K$ , an ad hoc estimator of the real number of clusters (Evanno et al., 2004); H', an estimator of similarity of cluster membership between individual runs for best K. The best  $\Delta K$  is shaded.

| 1 <sup>st</sup> step    |                |       |               |              |
|-------------------------|----------------|-------|---------------|--------------|
| All samples             |                |       |               |              |
| K                       | L(K)           | stdev | $\Delta K$    | H'           |
| 1                       | -3197.0        | 0.5   |               |              |
