

AN ADDITION TO THE ARTICLE
'NOTES ON THE HERPETOFAUNA OF SOME OF THE
CYCLADES ISLANDS, GREECE'

DAVID BUTTLE

2 Manchester Place, Norwich NR2 2SH

Due to an error, the following was omitted from the above article (BHS Bulletin 46: 5-14). Also included under the notes for Kimilos should have been:-

Ablepharus kitaibelii kitaibelii (Scincidae)

Three adults were found in the south of the island. Not previously recorded on Kimilos (Chondropoulos, 1986).

Thus, with the inclusion of the above species, ten reptile species are now known to have been recorded on Kimilos, i.e. *Tenuidactylus kotschyi*, *Hemidactylus tureicus*, *Lacerta trilineata*, *Podarcis milensis*, *Ablepharus kitaibelii*, *Eryx jaculus*, *Elaphe situla*, *Natrix natrix*, *Telescopus fallax*, *Vipera lebetina*.
